# Un impegno concreto per il futuro.

La qualità che contraddistingue Ceramiche San Nicola Srl si accompagna a una visione sempre più attenta alla **sostenibilità e alla responsabilità ambientale**.

Per questo, abbiamo scelto di investire nell'energia rinnovabile attraverso l'installazione di un impianto fotovoltaico sulla copertura della nostra sede. Una scelta che ci consente di valorizzare una risorsa naturale, **trasformandola in energia pulita destinata alle nostre attività produttive**.

L'energia generata dal nostro impianto fotovoltaico copre circa il 25% del fabbisogno complessivo di energia elettrica dell'azienda, **contribuendo a ridurre il ricorso alle fonti energetiche tradizionali e il nostro impatto sull'ambiente**.

Il nostro impegno si concretizza anche nel processo produttivo, dove gli scarti di lavorazione, sia crudi che cotti, **vengono recuperati e reintrodotti nel ciclo produttivo**, trasformando ciò che potrebbe rappresentare uno spreco in una risorsa da valorizzare. **Un approccio orientato all'ottimizzazione delle materie prime e alla riduzione degli sprechi, nel rispetto dei principi dell'economia circolare.**

Un investimento e una filosofia che esprimono la nostra idea di futuro: **crescere attraverso l'innovazione, con rispetto per l'ambiente, valorizzando le risorse e con attenzione alle generazioni che verranno.**

# A concrete commitment to the future.

The quality that distinguishes Ceramiche San Nicola Srl goes hand in hand with an increasingly strong commitment to **sustainability and environmental responsibility**.

For this reason, we have chosen to invest in renewable energy by installing a photovoltaic system on the roof of our headquarters. This choice allows us to make the most of a natural resource, **transforming it into clean energy for our production activities**.

The energy generated by our photovoltaic system covers approximately 25% of the company's overall electricity needs, **helping to reduce our reliance on traditional energy sources and our impact on the environment**.

Our commitment is also reflected in our production process, where both unfired and fired production waste is **recovered and reintroduced into the production cycle**, transforming what could otherwise become waste into a resource to be valued. **This approach is aimed at optimizing the use of raw materials and reducing waste, in accordance with the principles of the circular economy.**

An investment and a philosophy that reflect our vision of the future: **growing through innovation, with respect for the environment, responsible use of resources, and consideration for the generations to come.**
